

Spring-Boot

O Spring Boot é um projeto que chegou para facilitar o processo de configuração e publicação de nossas aplicações.

A intenção é ter o seu projeto rodando o mais rápido possível e sem complicação.

Ele consegue isso favorecendo a convenção sobre a configuração.

Com os módulos informados o Spring-Boot vai reconhecê-los e fornecer uma configuração inicial.

Basta que você diga pra ele quais módulos deseja utilizar:
WEB, Template, Persistência, Segurança, etc.

```
<parent>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-parent</artifactId>
  <version>1.5.10.RELEASE</version>
</parent>
```

```
<parent>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-parent</artifactId>
  <version>1.5.10.RELEASE</version>
</parent>

<dependencies>
  <dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-web</artifactId>
  </dependency>
  <dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-jdbc</artifactId>
  </dependency>
</dependencies>
```

```
<parent>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-parent</artifactId>
  <version>1.5.10.RELEASE</version>
</parent>

<dependencies>
  <dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-web</artifactId>
  </dependency>
  <dependency>
    <groupId>org.springframework.boot</groupId>
    <artifactId>spring-boot-starter-jdbc</artifactId>
  </dependency>
</dependencies>

<build>
  <plugins>
    <plugin>
      <groupId>org.springframework.boot</groupId>
      <artifactId>spring-boot-maven-plugin</artifactId>
    </plugin>
  </plugins>
</build>
```

```
@SpringBootApplication
public class DemoMvcApplication {

    public static void main(String[] args) {
        SpringApplication.run(DemoMvcApplication.class, args);
    }
}
```
